

Important End-of-Life Announcement

End of Support for FTI-33xx Series Sensor Monitors and FTI-33xx-Compatible FT (Long-Gage) Sensors

As of June 1, 2006, Fiber Optic Systems Technology Inc. (FOX-TEK) will not longer be providing support for the FTI-33xx-series Sensor Monitors, or FTI-33xx-compatible FT (Long-Gage) Sensors. This series includes the FTI-3300 and other custom FT (Long-Gage) Sensor Monitors with model numbers beginning with "FTI-33". This end-of-life announcement is consistent with FOX-TEK's Product Support Lifecycle Policy, which is available on the web site.

FOX-TEK currently offers the 3405 FT Sensor Monitor, which features numerous improvements, including a smaller footprint, onboard non-volatile data storage, more sophisticated interfacing capabilities (TCP/IP, which support Windows-based Remote Control and Data Download functions), and higher strain resolution.

The release of the FT 34xx-series Sensor Monitors is accompanied by a new series of FT 34xx-compatible FT Sensors. While the new FT 34xx-series of Sensor Monitors are capable of reading FTI-33xx-compatible FT (Long-Gage) Sensors, please ensure that this requirement is expressed to FOX-TEK before upgrading to a FT 34xx to ensure compatibility across your specific set of FTI-33xx legacy Sensors.
